EUROSTOXX 50: 1997-2004. SHAREHOLDER VALUE CREATION IN EUROPE

Pablo Fernández*
Alvaro Villanueva**

* Professor of Financial Management, PricewaterhouseCoopers Chair of Finance, IESE

** Research Associate, IESE

The CIIF, International Center for Financial Research, is an interdisciplinary center with an international outlook and a focus on teaching and research in finance. It was created at the beginning of 1992 to channel the financial research interests of a multidisciplinary group of professors at IESE Business School and has established itself as a nucleus of study within the School's activities.

Ten years on, our chief objectives remain the same:

- Find answers to the questions that confront the owners and managers of finance companies and the financial directors of all kinds of companies in the performance of their duties
- Develop new tools for financial management
- Study in depth the changes that occur in the market and their effects on the financial dimension of business activity

All of these activities are programmed and carried out with the support of our sponsoring companies. Apart from providing vital financial assistance, our sponsors also help to define the Center's research projects, ensuring their practical relevance.

The companies in question, to which we reiterate our thanks, are:
Aena, A.T. Kearney, Caja Madrid, Fundación Ramón Areces, Grupo Endesa, Telefónica and Unión Fenosa.

EUROSTOXX 50: 1997-2004. SHAREHOLDER VALUE CREATION IN EUROPE

Abstract

2004 was a good year for the shareholders of the companies in the Euro Stoxx 50: the shareholder value creation of these 50 companies was €42,880 million. It was not as good as 2003, however, when their value creation reached slightly over €160,000 million.

The companies that created most value for their shareholders were Enel (€13,364 million), ENI (11,855) and TIM (9,891). The companies that destroyed most value were Nokia (-€15,239 million), L'Oréal (-9,095) and Philips (-7,823). In 2004, the Euro Stoxx 50 was much more volatile than either the S&P 500 or the Dow Jones.

Shareholder value destruction in the three-year period 2002-2004 was €-0.9 trillion. The market value of the companies included in the Euro Stoxx 50 was €1.5 trillion in 2004 and €1.4 trillion in 2003.

We also calculate the created shareholder value of the 50 companies during the seven-year period 1997-2004. ENI was the top shareholder value creator and Vivendi, the top shareholder value destroyer during that period.

A portfolio long in the companies that entered the index and short in the companies that abandoned the index had on average a 7.2% return in the 20 days prior to the index recomposition and a 2.3% return in the 20 days after the index recomposition.

JEL Classification: G12, G31, M21

Keywords: shareholder value creation, created shareholder value, shareholder value added, shareholder return, required return to equity.

EUROSTOXX 50: 1997-2004. SHAREHOLDER VALUE CREATION IN EUROPE

In this paper we quantify shareholder value creation for the 50 companies included in the Euro Stoxx 50 in December 2004. We provide the created shareholder value for 2004, and also for the periods 1997-2004, 1998-2004, 1999-2004, 2000-2004, 2001-2004, 2002-2004 and 2003-2004. The top shareholder value destroyers in 2004 were Nokia (-€15,239 million), L'Oréal (-€9,095 million), and Philips (-€7,823million). The percentage of value creators was 89%, 72%, 63%, 51%, 12%, 2%, 72% and 58% for 1997, 1998, 1999, 2000, 2001, 2002, 2003 and 2004.

In section 1 we define created shareholder value. Section 2 has the evolution of the Euro Stoxx 50 index since 1993. Section 3 has the comparison between the Euro Stoxx 50 and another world index. Section 4 has the ranking of created shareholder value and return for the companies in 2004. Section 5 has the ranking of created shareholder value and return from the previous years. Section 6 splits the shareholder value creation by the country to which the 50 companies belong. Section 7 shows the relation between Shareholder Return and size. Section 8 is an analysis of the companies that entered and abandoned the Euro Stoxx 50 since 1997. Section 9 compares the Euro Stoxx 50 with other European and US indexes in terms of volatility and correlation.

Appendix 1 contains the evolution of the market value of the companies in the Euro Stoxx 50 in December 2004. Appendix 2 contains the evolution of shareholder value creation since 1997. Appendix 3 shows the evolution of shareholder return since 1997. Finally, Appendix 4 contains the volatility for the 50 companies in the Euro Stoxx 50 in December 2004.

1. Definition of created shareholder value

We define shareholder value created following Fernández (2002, chapter 1). To obtain the created shareholder value, we must first define the increase of equity market value, shareholder value added, shareholder return, and required return to equity.

The equity market value of a listed company is the company's market value, that is, each share's price multiplied by the number of shares. The **increase of equity market value** in one year is the equity market value at the end of that year less the equity market value at the end of the previous year.

Shareholder value added is the term used for the difference between the wealth held by the shareholders at the end of a given year and the wealth they held the previous year.

The shareholder value added is calculated as follows:

$\text{Shareholder value added} =$ Increase of equity market value + Dividends paid during the year - Outlays for capital increases + Other payments to shareholders (discounts on par value, share buy-backs....) - Conversion of convertible debentures

The **shareholder return** is the shareholder value added in one year, divided by the equity market value at the beginning of the year.

$$\text{Shareholder return} = \text{Shareholder value added} / \text{Equity market value}$$

The **required return to equity** is the sum of the interest rate of long-term Treasury bonds plus a quantity that is usually called the company's risk premium and which depends on its risk.

$$\text{Required return to equity} = \text{return of long-term treasury bonds} + \text{risk premium}$$

A company creates value for the shareholders when the shareholder return exceeds the required return to equity.

The **created shareholder value** is quantified as follows:

$$\text{Created shareholder value} = \text{Equity market value} \times (\text{Shareholder return} - K_e)$$

As we already saw that the shareholder return is equal to the shareholder value added divided by the equity market value, the created value can also be calculated as follows:

$$\text{Created shareholder value} = \text{Shareholder value added} - (\text{Equity market value} \times K_e)$$

Consequently, the value created is the shareholder value added above expectations, which are reflected in the required return to equity.

Table 1 shows in simplified form the relationship between three variables, which are sometimes confused: increase of equity market value, shareholder value added, and created shareholder value.

Table 1
Increase of equity market value, shareholder value added, and created shareholder value

<i>Increase of equity market value</i>	$\text{Equity market value}_t - \text{Equity market value}_{t-1}$
<i>Shareholder value added</i>	$\text{Increase of equity market value} - \text{payments from shareholders} + \text{dividends} + \text{repurchases} - \text{conversions}$
<i>Created shareholder value</i>	$\text{Shareholder value added} - (\text{Equity market value} \times K_e)$

2. Evolution of the Euro Stoxx 50

Figure 1 shows the evolution of the Euro Stoxx 50 price index since 1992. It stood at 1,000 points in December 1991 and 2,951 in December 2004. The historic maximum value was 5,464 (March 6, 2000).

Figure 1
Evolution of the Euro Stoxx 50 index

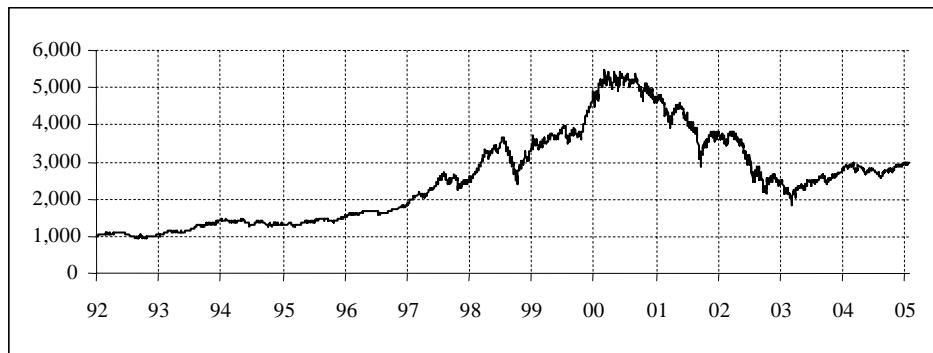

Table 2 contains the evolution of increase of capitalization, shareholder value added and shareholder value creation for the Euro Stoxx 50 since 1993. It is interesting to see the accumulated values. All of them are positive. If you compare the total of shareholder value added and the shareholder value creation, you can appreciate a big difference. That is because the shareholder value added often does not match shareholders' expectations.

Table 2
Increase of capitalization, shareholder value added, and created shareholder value in the Euro Stoxx 50 (€ thousand million)

Euro Stoxx 50	1993	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	Total

3. Comparison between Euro Stoxx 50 and another world index

Table 3 contains a comparison between the Euro Stoxx 50 return and the returns of the main indexes of the main European countries: AEX (Holland), CAC 40 (France), IBEX 35 (Spain), Mibtel 30 (Italy), Xetra-Dax (Germany), FTSE 100 (UK), as well as the S&P 500 (USA) and Dow Jones (USA). It also shows the market capitalization in December 2004.

The most profitable index in the whole period was the IBEX 35 and the least profitable was the FTSE 100. The S&P 500 was the biggest in capitalization in 2004.

Table 3
Comparison between the Euro Stoxx 50 and the AEX, CAC 40, IBEX 35, Mibtel 30, Xetra-Dax, FTSE 100, S&P 500 and Dow Jones (returns include dividends)

								3,791,790

4. Shareholder value creators and shareholder value destroyers in the Euro Stoxx 50 in 2004

The top shareholder value creator in 2004 was Enel (€13,364 million). The top shareholder value destroyers in 2004 were Nokia (-€15,239 million), L'Oréal (-€9,095 million) and Philips (-€9,095 million).

Table 4 contains the capitalization, shareholder value creation and shareholder return of the 50 companies in 2004. The sum of the capitalization of the 50 companies is higher than the capitalization of the Euro Stoxx 50 that appears in Table 3. This is because the capitalization of the index was not calculated with the whole capitalization of the companies, only with the percentages that appear in the last column.

The three companies that created the most shareholder value in the Euro Stoxx 50 in 2004 were Italian: Enel, Eni and Tim.

Enel (48%) was the most profitable company. The least profitable company was Carrefour (-17%). 38 companies had positive returns, but only 29 created shareholder value. The five least profitable companies were: Carrefour, Philips, Nokia, L'Oréal and Aegon. Seventeen companies had a shareholder return up to 20% in 2004.

5. Shareholder return, shareholder value creators and destroyers in the previous years

Table 5 contains the shareholder value creation of the companies of the Euro Stoxx 50 during the eight-year period 1997-2004. ENI was the top shareholder value creator (€27,165 million) and Vivendi, the top shareholder value destroyer (-€70,002 million). The percentages of the companies that created value were 89%, 72%, 63%, 51%, 12%, 2%, 72% and 58% in 1997, 1998, 1999, 2000, 2001, 2002, 2003 and 2004, respectively.

Table 6 contains the historic shareholder return. In the period 1997-2004, 40 companies had positive shareholder returns. In the period 2001-2004, only 14 companies had positive shareholder returns. Thirty-eight companies had positive shareholder returns in 2004.

6. Shareholder Value Creation and Shareholder Return by country

Table 7 contains some statistics on the companies in the Euro Stoxx 50 grouped by country. The first two columns show the market capitalization at the end of 2004. French companies accounted for 33% of total market capitalization. The third column shows that there were 17 French companies in the index.

Table 7
**Shareholder Value Creation and Shareholder Return by country of the 50 companies
in the Euro Stoxx 50 at the end of 2004**

	Market Capitalization 2004		No. Companies	Return 2004	Return 97-2004	CSV 04	
	€ million	%				€ million	%
France	602,189	33%	17	10%	136%	2,392	6%
Germany	412,060	22%	11	10%	84%	-665	-2%

Finland	54,193	3%	1	-14%	356%	-15,239	-36%
Total	1,841,058	100%	50	12%	139%	42,880	100%

7. Shareholder Return and size

Figure 2 shows the correlation between shareholder return and size (measured by market capitalization) in 2004. The correlation is small. The R-squared is 0.52% (that is, difference in size explained only 0.52% of the return).

Figure 3 plots the correlation between the ranking of shareholder return and the ranking of size. Again, the correlation is very weak.

Figure 4 shows the correlation of shareholder return in the eight-year period 1997-2004 and size (measured by market capitalization at the beginning of the period, in 1996). Again, no significant correlation is found. Difference in size explained only 13.61% of the return.

Figure 2
Shareholder return and size of the companies in the Euro Stoxx 50 in 2004

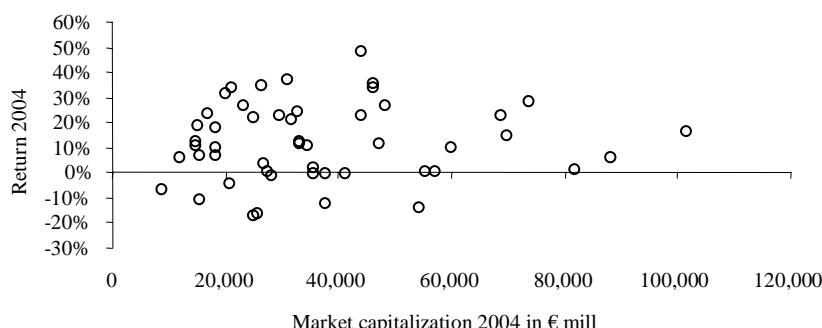

Figure 3
Ranking of shareholder return and size of the companies in the Euro Stoxx 50 in 2004

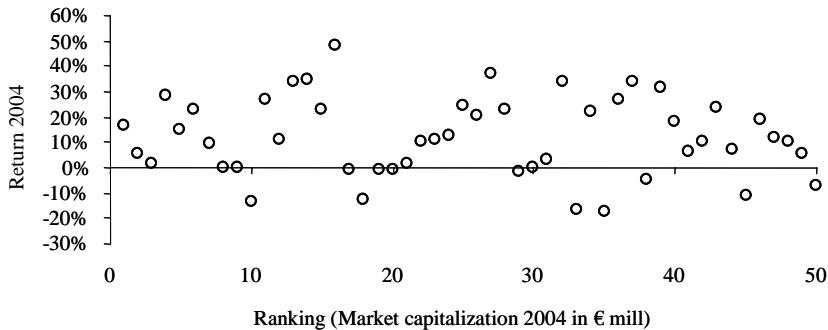

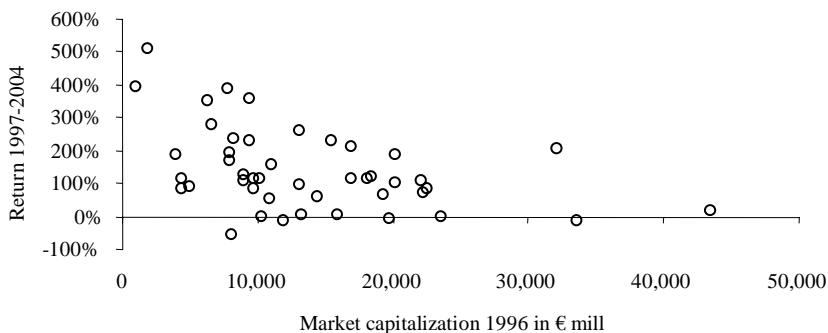

Figure 4
Correlation of shareholder return and size of the companies in the Euro Stoxx 50 in the period 1997-2004

8. Additions and deletions of companies in the Euro Stoxx 50 during the six-year period 1997-2003

Table 8 contains the companies added and removed from the Euro Stoxx 50.

Figure 5 shows the average cumulative return of the companies added to the Euro Stoxx 50 in the 40 days around the addition date (day 0). It may be seen that the average cumulative return in the 20 days before the addition was 5.3% (5.9% on top of the return of the Euro Stoxx 50). It may be seen, also, that the average cumulative return in the 20 days after the addition was 4.9%.

Figure 6 shows the average cumulative return of the companies removed from the Euro Stoxx 50 in the 40 days around the deletion date (day 0). It may be seen that the average cumulative return in the 20 days before the deletion was -2.1%. It may be seen, also, that the average cumulative return in the 20 days after the deletion was 2.4%.

Figure 7 shows the average cumulative return of a portfolio equally weighted long in the companies added, and short in the companies removed from the Euro Stoxx 50 in the 40 days around the addition/deletion date (day 0). It may be seen that the average cumulative return in the 20 days before the addition/deletion date was 7.2%, and that the average cumulative return in the 20 days after the addition/deletion date was 2.3%.

Table 8
Additions and deletions of companies in the Euro Stoxx 50 since 1997

	Deletions	Additions
22/09/1997	Sanofi, Schering AG, Thyssen AG	Paribas, L'Oreal, Portugal Telecom
22/12/1997	Pinault-Printemps-La Redoute	France Telecom
	Lufthansa, Schneider Electric, Allied	Basf, Bayerische Hypo-&Vereinsbank, Dresdner
20/09/1999	Irish Banks, Fiat, Spa, Akzo Nobel, Elsevier, Portugal Telecom	Bank, Muenchener Rueckver, BSCH, Suez Lyonnaise Des Eaux, Sanofi-Synthelabo
01/11/1999	Paribas, ELF Aquitaine	Pinault-Printemps-La Redoute, BNP
20/12/1999	Rhone-Poulenc	Aventis
14/02/2000	Mannesmann	Canal +
20/03/2000	Saint Gobain	Enel
18/09/2000	Electrabel, Metro	Groupe Danone, San Paolo-Imi
11/12/2000	Canal +	Volkswagen
23/07/2001	Dresdner Bank	TIM
24/09/2001	KPN	Saint Gobain
23/09/2002	Pinault-Printemps-La Redoute	Lafarge
22/09/2003	Bayer. Hypo- und VereinsBank	Iberdrola
28/07/2004	Aventis	SAP
20/09/2004	Volkswagen	Credit Agricole

Figure 5
Average Cumulative Return of additions to the Euro Stoxx 50

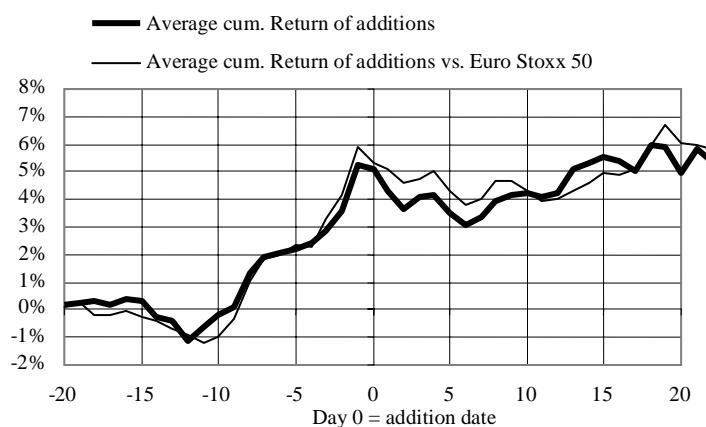

Figure 6
Average Cumulative Return of deletions from the Euro Stoxx 50

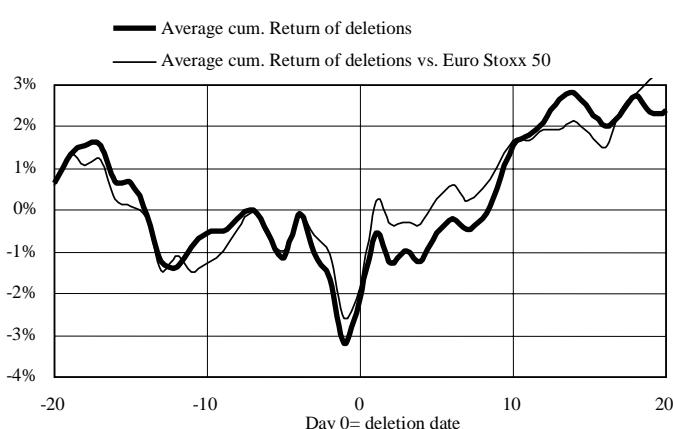

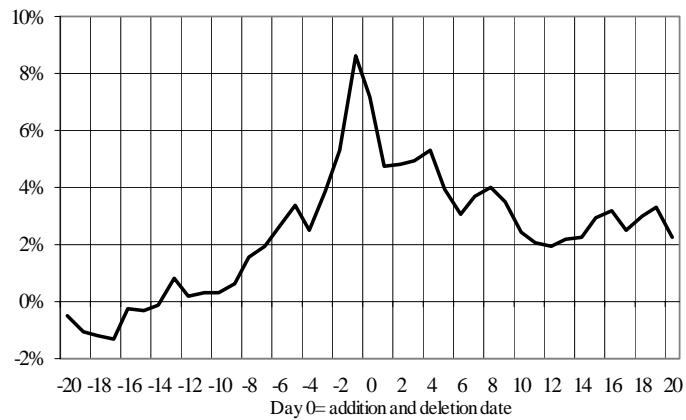

Figure 7
**Average cumulative return of a portfolio long in the company added and short
in the company deleted from the Euro Stoxx 50**

9. Volatility and correlation with other indexes of the Euro Stoxx 50

Figure 8 compares the volatilities (annualized standard deviation of the daily returns of the last year) of the Euro Stoxx 50, of the S&P 500 and of the Dow Jones. It may be seen that the Euro Stoxx 50 has been much more volatile than the American Indexes, especially in 1999 and after September 11, 2001.

Figures 9 and 10 compare the volatility (annualized standard deviation of the daily returns of the last year) of the Euro Stoxx 50 with the volatilities of the national indexes of France (CAC 40), Germany (Dax), Spain (Ibex 35), and UK (FTSE 100). The FTSE 100 (there are no UK companies in the Euro Stoxx 50) has been much less volatile than the Euro Stoxx 50.

Figures 11, 12, and 13 offer the same comparison as Figures 8, 9 and 10, but the volatility is the annualized standard deviation of the daily returns of the last 20 days (instead of the last year).

Table 8 offers the correlation among the indexes using daily returns of the eight-year period 1997-2004. The correlation of the Euro Stoxx with the continental indexes is higher than 0.83. The correlation of the Euro Stoxx 50 with the FTSE 100 is 0.83. The correlation of the Euro Stoxx 50 with the American indexes is much lower: 0.481 and 0.466.

Tables 9 and 10 split the period used for calculating the correlation into two sub-periods. Table 9 shows the correlation of the 3-year sub-period 1997-1999, and Table 10 shows the correlation of the five-year sub-period 2000-2004. Table 11 is the difference between Tables 9 and 10. It may be seen that the correlation of the Euro Stoxx 50 with all other indexes was higher in 2000-2004 than in 1997-1999.

Figures 12 to 15 show the evolution of the correlations. Figures 12 and 13 contain the correlations of the daily returns of the last 20 days, while Figures 14 and 15 contain the correlations of the daily returns of the last year.
